I have for sale an excellent imaging and observing platform that has served me well for many years. I am the original owner and I purchased the G11 with Gemini 1 directly from Losmandy. The mount is in excellent condition and was Hypertuned by Ed Thomas of Deep Space Products a few years ago including the installation of a new high precision Losmandy one piece worm (OPW) and new gearboxes. It tracks and guides very well with minimum corrections from a guide camera. I have used 10" SCT's with guide scopes and cameras, 6' refractors with cameras and filter wheels on this mount with zero issues - the drive motors are strong and run cool with proper balance. Many upgrades and accessories are included in the package. I want to try to sell locally in the Phoenix area and will consider driving to nearby communities in Arizona to meet buyer.

Upgrades

Altitude knobs New price - \$27
